## Dry Mount Tissue

ColorTac/DMT is a multipurpose dry mount tissue that was developed for maximum versatility. The tissue is a paper based tissue that is breathable and heat reversible. The tissue is manufactured without the use of solvents and does not require solvents to remove. It activates at 165 degrees F with a dwell time of 2 minutes. The special polymer adhesive allows for bonding at low temperatures and produces excellent adhesion. The tissue adheres well to a variety of substrates and is ideal for mounting RC photographs and fiber based prints. Its low activating temperature allows for the mounting of heat sensitive items, including, ink jet media. The product is reversible and can be removed at a temperature of 190 degrees F. Dry-Lam tissue is available in 25 and 100 sheet packs and roll sizes up to 48.5 inches wide.
